

1. A disposable barrier for a laboratory splash pan having a tray-like base, a raised closed end portion, and an elevated lip, comprising:
  - a non-porous rigid disposable insert, having a tray-like base, a raised end portion, and an elevated lip, shaped to provide protection to the interior surface of both the tray-like base and the raised closed end portion of the laboratory splash pan; and,
  - an extended perimeter means formed in said insert for overlying and protecting the elevated lip of the laboratory splash pan.
- 2.
25. A disposable barrier as recited in claim 1, wherein said extended perimeter means includes a foldable flap extending around a perimeter of the tray-like base, so as to be folded over the elevated lip of a splash pan.
26. A disposable barrier for a laboratory splash pan having a tray-like base, a raised closed end portion, and an elevated lip, comprising:
  - a non-porous rigid disposable insert, having a tray-like base, a raised end portion, and an elevated lip, shaped to provide protection to the interior surface of both the tray-like base and the raised closed end portion of the laboratory splash pan; and,
  - an extended perimeter means formed in said insert for overlying and protecting the elevated lip of the laboratory splash pan, and
  - a reservoir formed within said insert for retention of a substance.
27. The disposable barrier of claim 26 wherein said reservoir is integrally formed within a bottom surface of said insert.
28. The disposable barrier of claim 26 further comprising a removable cover to secure a substance within said reservoir.
29. A disposable barrier for a laboratory splash pan having a tray-like base, a raised enclosed canopy, and an elevated lip, comprising:
  - a non-porous rigid disposable insert, having a tray-like base, a raised enclosed canopy, and an elevated lip, shaped to provide protection to the interior surface of both the tray-like base and the raised enclosed canopy of the laboratory splash pan; and,
  - an extended perimeter means formed in said insert for overlying and protecting the elevated lip of the laboratory splash pan.
30. The disposable barrier of claim 29 further comprising a reservoir formed within said insert.
31. The disposable barrier of claim 29 wherein said reservoir is integrally formed within a bottom surface of said insert.

32. The disposable barrier of claim 29 further comprising a removable cover to secure a substance within said reservoir.
